PROJECT

Digital clock program:  
This JavaScript program creates a digital clock by utilizing HTML to structure the webpage and dynamically updating the displayed time using the setInterval function to refresh the clock every second based on the current system time. The script extracts the hours, minutes, and seconds from the Date object, formats them, and then updates the content of an HTML element with the resulting time string.

Counter program:  
This JavaScript counter program involves HTML and JavaScript to display a counting mechanism. It employs event listeners to detect user interactions with increment and decrement buttons, updating a counter variable and reflecting the changes in the HTML content dynamically.

Temparature conversion program:  
Allows user to seamlessly convert between Celsius and Fahrenheit with an intuitive user interface.

INTERESTS
